THE CARTER SYSTEM

EXPERIENCE. The house of Carter was the first to make a study of grasses for golfing and pleasure turf. Added to this is exhaustive research in climatic and soil conditions of this country and abroad. The Carter System has produced more championship golf courses in the past twenty years than all other seed houses put together. This experience has peculiarly fitted the Carter experts to prescribe special mixtures of seed that will produce the finest golfing turf in *any locality*.

SERVICE. We are just as much interested in seeing that our customers get desired results as we are in selling seed. Our experts can advise you in regard to the laying out of new courses, rearrangement of old courses, bunkering, etc.; also the production or renovation and maintenance of the turf. When necessary samples of the soil are examined or analysed. Our recommendations are then submitted as to the manner in which the soil should be prepared, fertilized and sown.

QUALITY. All our seeds are of the highest percentages of purity and germination and true to name. We offer nothing but the best tested stocks. Messrs. James Carter & Co. are probably the

largest, if not the oldest, and certainly the best known firm of actual seed producers in the world today. Throughout the hundred years in which their business has been steadily expanding, they have spared no effort or expense to keep their products ahead of all others in pedigree, yield, purity and germination. Their seed farms, botanical laboratories, trial grounds, electric cleaning machinery and unique methods mark the highest step yet attained in scientific seed production.

RESULTS. The Carter System has produced the finest golfing turf in the world. No finer quality of turf can be found in America than on the Country Club of Detroit and Mayfield Country Club courses, taking them as a whole, fair greens and putting greens, and considering that they are “inland” courses. We print a short list of some of the most prominent golf courses sown with Carters Tested Grass Seeds on pages 9 and 11.

MARKET SITUATION. The grass seed situation is serious in some ways owing to the European War and the shortages in some of the best varieties. There are no good stocks obtainable of South German Creeping Bent or any of the European Fescues, such as Hard Fescue, Sheep Fescue and Fine Leaved Sheep Fescue. The exportation of seed from Germany has been prohibited since 1914, and if any of the above varieties are offered for sale they are American or New Zealand grown substitutes, or very old seed of poor germinating qualities.

We advise all our customers to place their orders early.
